

PUSHING THE LIMITS OF LABVIEW

Expert LabVIEW™ Consulting Services

Do you need to...

- Develop instrument control software for industrial automation, test, and measurement applications?
- Use NI LabVIEW to rapidly build large-scale commercial, mission-critical applications?
- Turn your R&D software prototype into a finished, robust product that you can confidently deliver to your customers?
- Reduce project risk and increase efficiency by augmenting your LabVIEW team with experts and by adopting better LabVIEW software engineering practices?

JKI Will Help You Succeed!

We are an experienced consulting team that works with companies to build complex software products written in LabVIEW. Founded in 2002, we excel at developing instrument control software for industrial automation, test, and measurement applications. You'll find our happy customers in a variety of high-tech industries, from biotech to aerospace to semiconductor. While most of us are based in the San Francisco Bay Area, we help LabVIEW teams all over the world.

How We Help You

Our role on your project can range from providing extra bandwidth and mentorship for your in-house developers to providing 100% of your ongoing LabVIEW development needs. We can scale our involvement up or down according to your needs, and we are committed to being a part of your company's long-term success with LabVIEW.

Why Choose JKI?

We specialize in large-system and commercial LabVIEW software development. Very few other consulting companies have the level of commercialization experience we can offer. We are experts in making your LabVIEW applications look and feel like "real software" and run with rock solid reliability; your customers won't even know your software was written in LabVIEW.

We make professional tools for LabVIEW developers. And because we provide both products and services, we truly understand what it takes to turn prototype or R&D software into a robust, shippable commercial application. We "eat our own dog food" by using our own tools daily.

"JKI has been instrumental in allowing us to offer a high quality, user-friendly software solution to our customers at a fraction of the cost of maintaining a full in-house software team. They work efficiently and bring a tremendous amount of value to the process."

*– Michael Schwartz
Program Director, Fluxion Biosciences*

OUR COMMERCIAL TOOLS FOR LABVIEW

In addition to expert consulting services, JKI offers powerful LabVIEW add-on products, like VI Package Manager™, to help LabVIEW developers and teams of all skill levels create high-quality software quickly and easily. Over 20,000 users around the world rely on our tools.

Expert LabVIEW Consulting Services

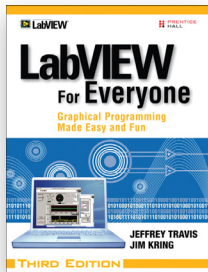

We have an extensive track record of successful projects.

Satisfied repeat clients make up most of our business and typically continue to work with us for 3-5 years.

“Best practice” processes and tools are The JKI Way. We bring state-of-the-art software engineering practices to LabVIEW development, applying advanced engineering tools and best practices to every project. We leverage prior work, extensive knowledge, and our own in-house tools to rapidly complete projects.

Our close relationship with National Instruments’ R&D team helps us find solutions to even the toughest LabVIEW problems.

Our engineers are proven software developers with an average of 12 years of experience using LabVIEW. Most are Certified LabVIEW Architects, and the rest are Certified LabVIEW Developers or Associate Developers.

Our people are recognized leaders in the overall “LabVIEW Ecosystem.” We founded major LabVIEW communities like LAVA and OpenG, and we regularly present at LabVIEW User Group meetings and NI events around the United States. We also spearheaded the release of LabVIEW Scripting and have created several powerful free tools for LabVIEW developers. JKI’s founder, Jim Kring, even wrote “The Book” on LabVIEW (*LabVIEW for Everyone*, 3rd Edition; Prentice Hall, 2007).

If you have a mission-critical LabVIEW project, JKI is the low-risk solution.

Talk to us!

We want to make LabVIEW the platform of choice for your organization’s commercial software products and instrument control systems... and to make your team wildly successful. If you need to make sure that your biggest and most difficult projects are delivered on time, within budget, and with even-higher-than-expected quality, JKI is the right LabVIEW consulting partner for you.

Call us for a free evaluation of your project. We’d be delighted to discuss your needs and see how we can help.

“Most JKI engineers are NI LabVIEW Certified Architects, and all others are Certified Developers and Certified Associate Developers. We take training and certification very seriously at JKI and consider it a part of every LabVIEW developer’s journey to becoming a true LabVIEW expert. We’re also dedicated contributors to the LabVIEW community, and at last count have four LabVIEW Champions on our team.”

*– Jim Kring
